

AMENDMENTS TO CLAIMS

Please replace all prior versions and listings of claims in the Application with the following Listing of Claims.

Listing of Claims

1. **(Currently Amended)** A method for providing location data of a mobile device using a web service, comprising:
 - polling, by the web service, the mobile device to provide location data;
 - receiving location data at the web service associated with and transmitted by the mobile device;
 - receiving a location request from a client at the web service, the location request including information identifying the mobile device and the client;
 - sending a permission request to the mobile device in response to the received location request; and
 - providing access to the location data associated with the mobile device based on a response by the mobile device to the permission request.
2. **(Original)** The method of Claim 1, the location data comprising a geographic location and a time stamp.
3. **(Original)** The method of Claim 1 further comprising determining request permissions associated with the mobile device based on the identified client.
4. **(Original)** The method of Claim 1, the location request comprising a monitoring request and a criteria for comparing location data.
5. **(Original)** The method of Claim 4 further comprising:
 - periodically receiving additional location data associated with the mobile device;
 - comparing the received location data associated with the mobile device to the criteria; and

automatically communicating an alert to the client in response to the location data satisfying the criteria.

6. **(Original)** The method of Claim 5, the criteria comprising the mobile device arriving at a location.

7. **(Original)** The method of Claim 5, the mobile device comprising a first mobile device, the criteria comprising a determination of a location of the first mobile device within a specified distance of a second mobile device.

8. **(Original)** The method of Claim 5, the criteria comprising the mobile device crossing a geographic perimeter.

9. **(Original)** The method of Claim 1, the response comprising a route that the mobile device travels between a first and a second location.

10. **(Original)** The method of Claim 1, the response comprising a speed that the mobile device travels over a period of time.

11. **(Canceled)**

12. **(Currently Amended)** A computer readable medium containing computer-executable instructions for providing location data of a mobile device using a web service, the instructions operable when executed on a computing device to:

poll, by the web service, the mobile device to provide location data;

receive location data at the web service associated with and transmitted by the mobile device;

receive a location request from a client at the web service, the location request including information identifying the mobile device and the client;

send a permission request to the mobile device in response to the received location request; and

provide access to the location data associated with the mobile device based on a response by the mobile device to the permission request.

13. (***Previously Presented***) The computer readable medium of Claim 12, wherein the location data includes a geographic location and a time stamp.

14. (***Previously Presented***) The computer readable medium of Claim 12 further operable to determine request permissions associated with the mobile device based on the identified client.

15. (***Previously Presented***) The computer readable medium of Claim 12, the location request comprising a monitoring request and a criteria for comparing location data.

16. (***Previously Presented***) The computer readable medium of Claim 15 further operable to:

periodically receive additional location data associated with the mobile device;
compare the received location data associated with the mobile device to the criteria; and

automatically communicate an alert to the client in response to the location data satisfying the criteria.

17. (***Previously Presented***) The computer readable medium of Claim 16, the criteria comprising the mobile device arriving at a location.

18. (***Previously Presented***) The computer readable medium of Claim 16, the mobile device comprising a first mobile device, the criteria comprising a determination of a location of the first mobile device within a specified distance of a second mobile device.

19. (***Previously Presented***) The computer readable medium of Claim 16, the criteria comprising the mobile device crossing a geographic perimeter.

20. (***Previously Presented***) The computer readable medium of Claim 12, the response comprising a route that the mobile device travels over a period of time.

21. (***Previously Presented***) The computer readable medium of Claim 12, the response comprising a speed that the mobile device travels between a first and a second location.

22. (***Canceled***)

23. (***Currently Amended***) A system for providing location data of a mobile device using a web service, comprising:

memory operable to store information associated with a plurality of network devices in the enterprise network; and

one or more processors collectively operable to:

poll, by the web service, the mobile device to provide location data;

receive location data at the web service associated with and transmitted by the a mobile device;

receive a location request from a client at the a web service, the location request including information identifying the mobile device and the client; and

send a permission request to the mobile device in response to the received location request; and

provide access to the location data associated with the mobile device based on a response by the mobile device to the permission request.

24. (***Original***) The system of Claim 23, the location data comprising a geographic location and a time stamp.

25. **(Original)** The system of Claim 23, further comprising the processors operable to determine request permissions associated with the mobile device based on the identified client.
26. **(Original)** The system of Claim 23, the location request comprising a monitoring request and a criteria for comparing location data.
27. **(Original)** The system of Claim 26, the processors further operable to:
periodically receive additional location data associated with the mobile device;
compare the received location data associated with the mobile device to the criteria; and
automatically communicate an alert to the client in response to the location data satisfying the criteria.
28. **(Original)** The system of Claim 27, the criteria comprising the mobile device arriving at a location.
29. **(Original)** The system of Claim 27, the mobile device comprising a first mobile device, the criteria comprising a determination of a location of the first mobile device within a specified distance of a second mobile device.
30. **(Original)** The system of Claim 27, the criteria comprising the mobile device crossing a geographic perimeter.
31. **(Original)** The system of Claim 23, the response comprising a route that the mobile device travels over a period of time.
32. **(Original)** The system of Claim 23, the response comprising a speed that the mobile device travels between a first and a second location.
33. **(Canceled)**

34. (***Currently Amended***) A method for providing location data of a mobile device using a web service, comprising:

polling, by the web service, the mobile device to provide location data;

receiving location data at the web service associated with and transmitted by a plurality of mobile devices, the location data including a geographic location and a time stamp;

receiving a location request from a client at the a web service, the location request including a monitoring request, criteria, and information identifying the mobile device and the client;

sending a permission request to the mobile device in response to the received location request;

providing access to the location data associated with the mobile device based on a response by the mobile device to the permission request;

periodically receiving additional location data associated with the mobile device;

comparing the received location data associated with the mobile device to the criteria; and

automatically communicating an alert from the web service to the client in response to the location data satisfying the criteria.

35. (New) A method for providing location data of a mobile device using a web service, comprising:

- polling, by the web service, the mobile device to provide location data;
- receiving location data at the web service associated with and transmitted by the mobile device;
- receiving a location request from a client at the web service, the location request including information identifying the mobile device and the client;
- authorizing, at the web service, the client to access the location data based at least in part on the identified mobile device and the client; and
- providing the client with the location data.

36. (New) The method of claim 35, wherein polling by the web service is pre-defined and controlled by a polling configuration profile.
